

TEFF GRASS

Premium Sun-Cured Teff Grass Forage

PELLETS

Teff Grass Pellets are low in sugar, high in fiber, and are highly palatable.

- Recommended for senior, overweight and metabolic horses.
- Pellets are a convenient, easy-to-measure feed option.
- For increased hydration, aggressive eaters, or horses with dental issues, pellets are recommended to be fed wet, soaked in water (2 parts water to 1 part pellets) for 30 min. or until properly softened.

FEEDING RECOMMENDATIONS

Forage is the most important component of a horse's diet and should be fed at a rate of 1.5-2.5% of a horse's body weight. Gradually replace existing hay with Standlee over a seven to fourteen (7-14) day period. Standlee recommends that pelleted forage is not the sole source of forage for horses since feeding some long-stem forage may help eliminate boredom and prevent stall vices.

NEVER FEED MOLDY OR INSECT INFESTED FORAGE TO ANIMALS

ANIMAL FEEDING INSTRUCTIONS

TARGET FEEDING RATE (% of body weight to feed per day)	MAX 2.5%	MAX 1.5%	MAX 4%
FEEDING CHANGE TIMEFRAME (Duration to transition to feeding change)	7-14 Days (Gradually replace existing hay)		

Animal Weight x Target Feeding Rate = Daily Forage Recommendation

Recommended for: livestock, goats, sheep, bison, camels, alpacas, deer, and elk
