

Installation Instructions

Sonic Shield™ Pest Deterrent with Guard Dog Sound

Thank you for purchasing the Sonic Shield™ – Pest Deterrent with Guard Dog Sound. For best results please read these instructions before using and retain them for future reference.

Sonic Shield™ Overview:

Bird • B • Gone® Sonic Shield™ pest deterrent scares animals and birds away from yards, patios, decks, balconies, and other areas using a combination of sound and light. Sonic Shield™ pest deterrent features a motion sensor that triggers a loud dog bark and flashing LED light when a pest crosses its path. The unit is small, portable, and operates on four AA batteries (not included). Place the product where you are having problems with birds and pests and watch them flee the area! This pest deterrent is the perfect choice when you have a variety of pests, many of which cannot hear ultrasonic noises. Bird • B • Gone® Sonic Shield™ pest deterrent offers two protection modes. Day-time mode scares birds away through the combination of loud dog bark sounds and flashing LED lights. Night time mode is for use in areas where night time noise is discouraged and utilizes the flashing LED light feature to scare the animals and birds from the area.

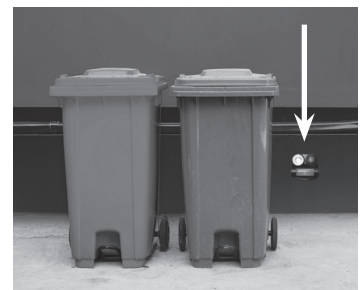

How to install your Sonic Shield™:

1. Ensure unit is in the OFF position. Install 4 AA Alkaline batteries.
2. Select an area for your Sonic Shield™ [Figure A].
 - a. Determine the area where you would like to deter pest birds and animals.
 - b. For best detection, unit should be positioned 4.8" - 14.2" above ground.
 - c. The unit is activated by a Passive Infrared motion sensor - be sure to choose an area with high pest traffic. Pests may be detected up to 30 feet, depending on the size of the animal.
 - d. Make sure the flashing light will not be blocked.
3. After you have located the area for your Sonic Shield™, insert screws into the wall at the appropriate height and

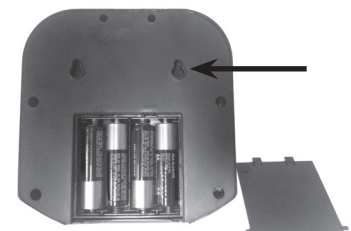

location (3/4 inch screws are best). The Sonic Shield™ can also be set near the area where pests are an issue.

4. Mount the Sonic Shield™ by pushing wall mount onto screws [Figure B].
5. After the unit is secure, locate the function switch and test your Sonic Shield™ [Figure C].
6. When the unit is in DAY Mode, lights will flash and the Sonic Shield™ will emit a dog bark to frighten the pest. When the unit is in NIGHT Mode, the unit will use only the flashing light to deter the pest. No sounds are emitted in Night Mode.
